

# MELBOURNE AIRPORT EXTERNAL LIGHTING UPGRADE PROJECT SNAPSHOT

## Melair External Lighting Upgrade

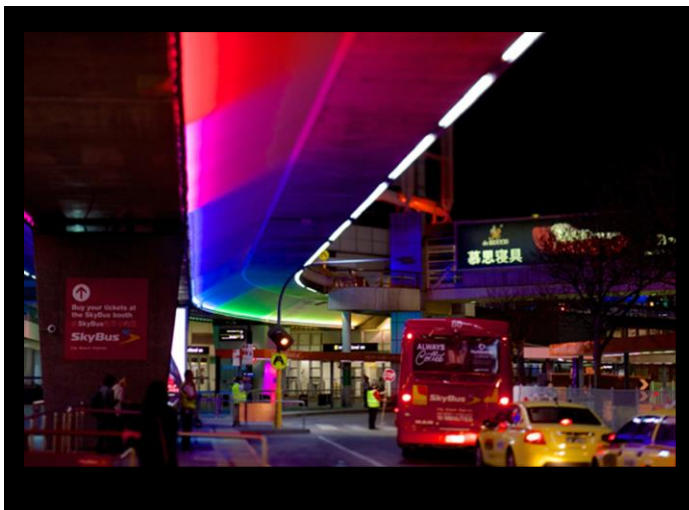

APEC were awarded the External Lighting Replacement Upgrade Project at the Melbourne Airport Arrivals & Departure areas.

APAM saw the need to update the look of the Melbourne Airport façade, the busiest space in Melbourne. APEC were engaged to install the lighting system selected by APAM. This lighting system consisted of a proprietary lighting control system that included the supply of optic fibre backbone cabling to provide control and interface to the Melair BMS System.

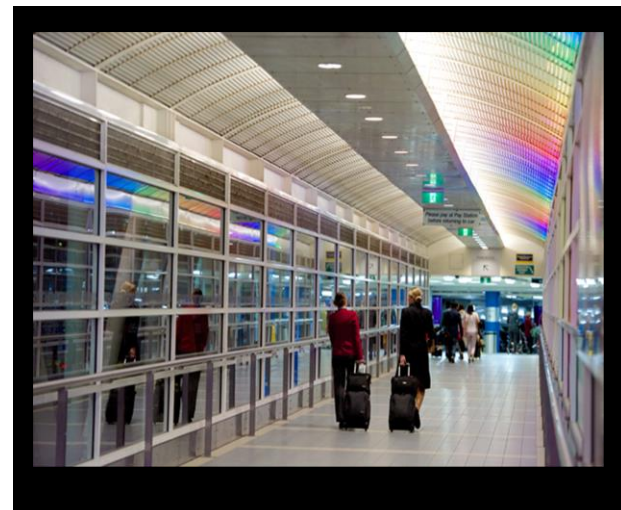

Traffic & Pedestrian Management was a major consideration for these works. Being such a major upgrade, APEC had to work with multiple stakeholders to deliver final outcome that changed the face of the most visited space in Melbourne
